

# Healthcare GRC and Security with INRY and our QSA partner

Establish integrated GRC and Security capabilities aligned with industry standards like HIPAA, HITECH, HITRUST, NIST, and ISO

**INRY**

Organizations that manage Electronic Health Records (EHR) or Protected Health Information (PHI) are highly regulated, and effectively managing information security and privacy is an ongoing challenge. EHR and PHI are defined broadly to include any part of a patient’s health or payment history. Covered entities include not only hospitals, healthcare professionals, insurance agencies, claims and payments processing agencies, etc., but also third parties, business associates and universities and government agencies involved in using healthcare data for research or development purposes. Ongoing news about data breaches continues to raise concerns with respect to the security and privacy of healthcare data.

INRY has teamed up with ServiceNow® and our Qualified Security Assessor (QSA) partner, to deliver powerful capabilities that help clients manage and structure Healthcare Industry compliance requirements with EASE – Efficient Agile Secure Experiences.

## Benefits

Better control over protection of patient data and privacy	Integrated risk management with risk register, built in tools for risk analysis, mitigation planning, and monitoring	Intelligent workflows connecting all relevant functions for faster and effective resolution of security incidents
In depth, timely and real-time insights with interactive dashboards	Efficient, effective and risk-based Vendor Management capabilities	Automated alerts & notifications to track progress and send reminders
Streamline compliance with HIPAA, HITRUST, NIST, ISO, PCI, COBIT, etc.	Consolidate GRC & Security data for actionable insight & visibility	Gather once, certify many with our QSA partner’s audit methodology and IT Compliance Platform
